---

##### Front-end technologies :

html,css,bootstrap,javascript,react

##### Back-end technologies :

-Node.js , mongodb

#### Projects

---

##### Car selling website

[Client site](#) || [Server site](#) || [Live site](#)

- This is a complete full stack project .You can easily order your favorite car and get it .
- i used firebase for the login system and also solved redirects and reload issue.
- When anyone click the buy button then he goes to login when he is a new user then he registers the website otherwise he could not buy a car because the order page is highly protected on private routes.
- This website has an admin panel and only admin can see this page. the system has also all product menu bar , review system , my order and many others feature are there

##### Technologies :

html,css,bootstrap,javascript,react,mongodb ,node

## Health care website

[Client site](#) || [Live site](#)

- A front-end website . This website is static. This site is a health care site.
- Service page fully protected when he/she go to service field he/she don't in there they go to login page after login they go to they wanted go to.if they are new user then he/she register firstly.
- Our service is mainly healthcare related . If anyone contacts or register on this website we help them for their needs.

**Technologies** : html,css,bootstrap,react

## Engineer hire website

[client site](#) || [live site](#)

- It is a simple hiring professor website.
- You are making a good software team by hiring them.

**Technologies** : html,css,bootstrap,react

## Education

---

### BSC IN SOFTWARE ENGINEERING

Daffodil international university
